

METHOD AND SYSTEM FOR PROVIDING A GRAPHICAL USER INTERFACE FOR
A SCRIPT SESSION

ABSTRACT OF THE DISCLOSURE

5 Embodiments of the present invention comprise a system and method of providing a graphic user interface (GUI) for scripts. The system comprises one or more scripts, a script GUI module and an interface unit. The script GUI module establishes and maintains communication channels between an executing script and the interface unit. The script GUI module receives information from the executing script and determines if the information
10 comprises an input type command. If the information comprises an input type command, the script GUI module generates an appropriate input mechanism as a function of said input type command.
